$\begin{matrix} \text{Post} & \text{Get} \\ \downarrow & \downarrow \\ \text{some_name}(\text{enum?}) \end{matrix}$ scans the corresponding input
and returns a pair of `Array<String>`
such that:

`input.name[0] = input.value[0] & input.name[1] = input.value[1] & ... & input.name[n] = input.value[n]`
is the query string
